

## **Restriction of the use of certain Hazardous Substances (RoHS)**

As a responsible global enterprise, Bivio Networks remains dedicated to the development, manufacture, and distribution of environmentally safe and acceptable products. To this end, Bivio Networks is supportive of the elimination of environmentally-sensitive substances in our product lines as defined by the European Union's Directive on the Restriction of the use of certain Hazardous Substances (RoHS).

To facilitate our products compliance with the RoHS Directive, Bivio Networks has and will continue to work diligently with our supply chain partners to restrict the use of cadmium, hexavalent chromium, lead, mercury and other RoHS restricted materials within our components, sub-systems and systems, with a target for full compliance in 2006. Furthermore, Bivio Networks has systematically instituted product development principles to ensure all future products are designed and manufactured to comply with the RoHS Directive.

We at Bivio Networks are devoted to this initiative. Directives such as RoHS are an important step towards ensuring the safety and health of our environment and we welcome the opportunity to contribute to the successful implementation of this effort.
